

SANCTUM

DAPP DEMO

What is SANCTUM?

SANCTUM is a blockchain-based donation platform that redefines charitable giving and philanthropy, prioritizing transparency, efficiency, and donor empowerment. By leveraging blockchain technology and innovative features like Decentralized Autonomous Organizations (DAOs), SANCTUM creates a secure and transparent ecosystem for donors, while also ensuring the legitimacy of the NGOs receiving support.

NGOs on SANCTUM

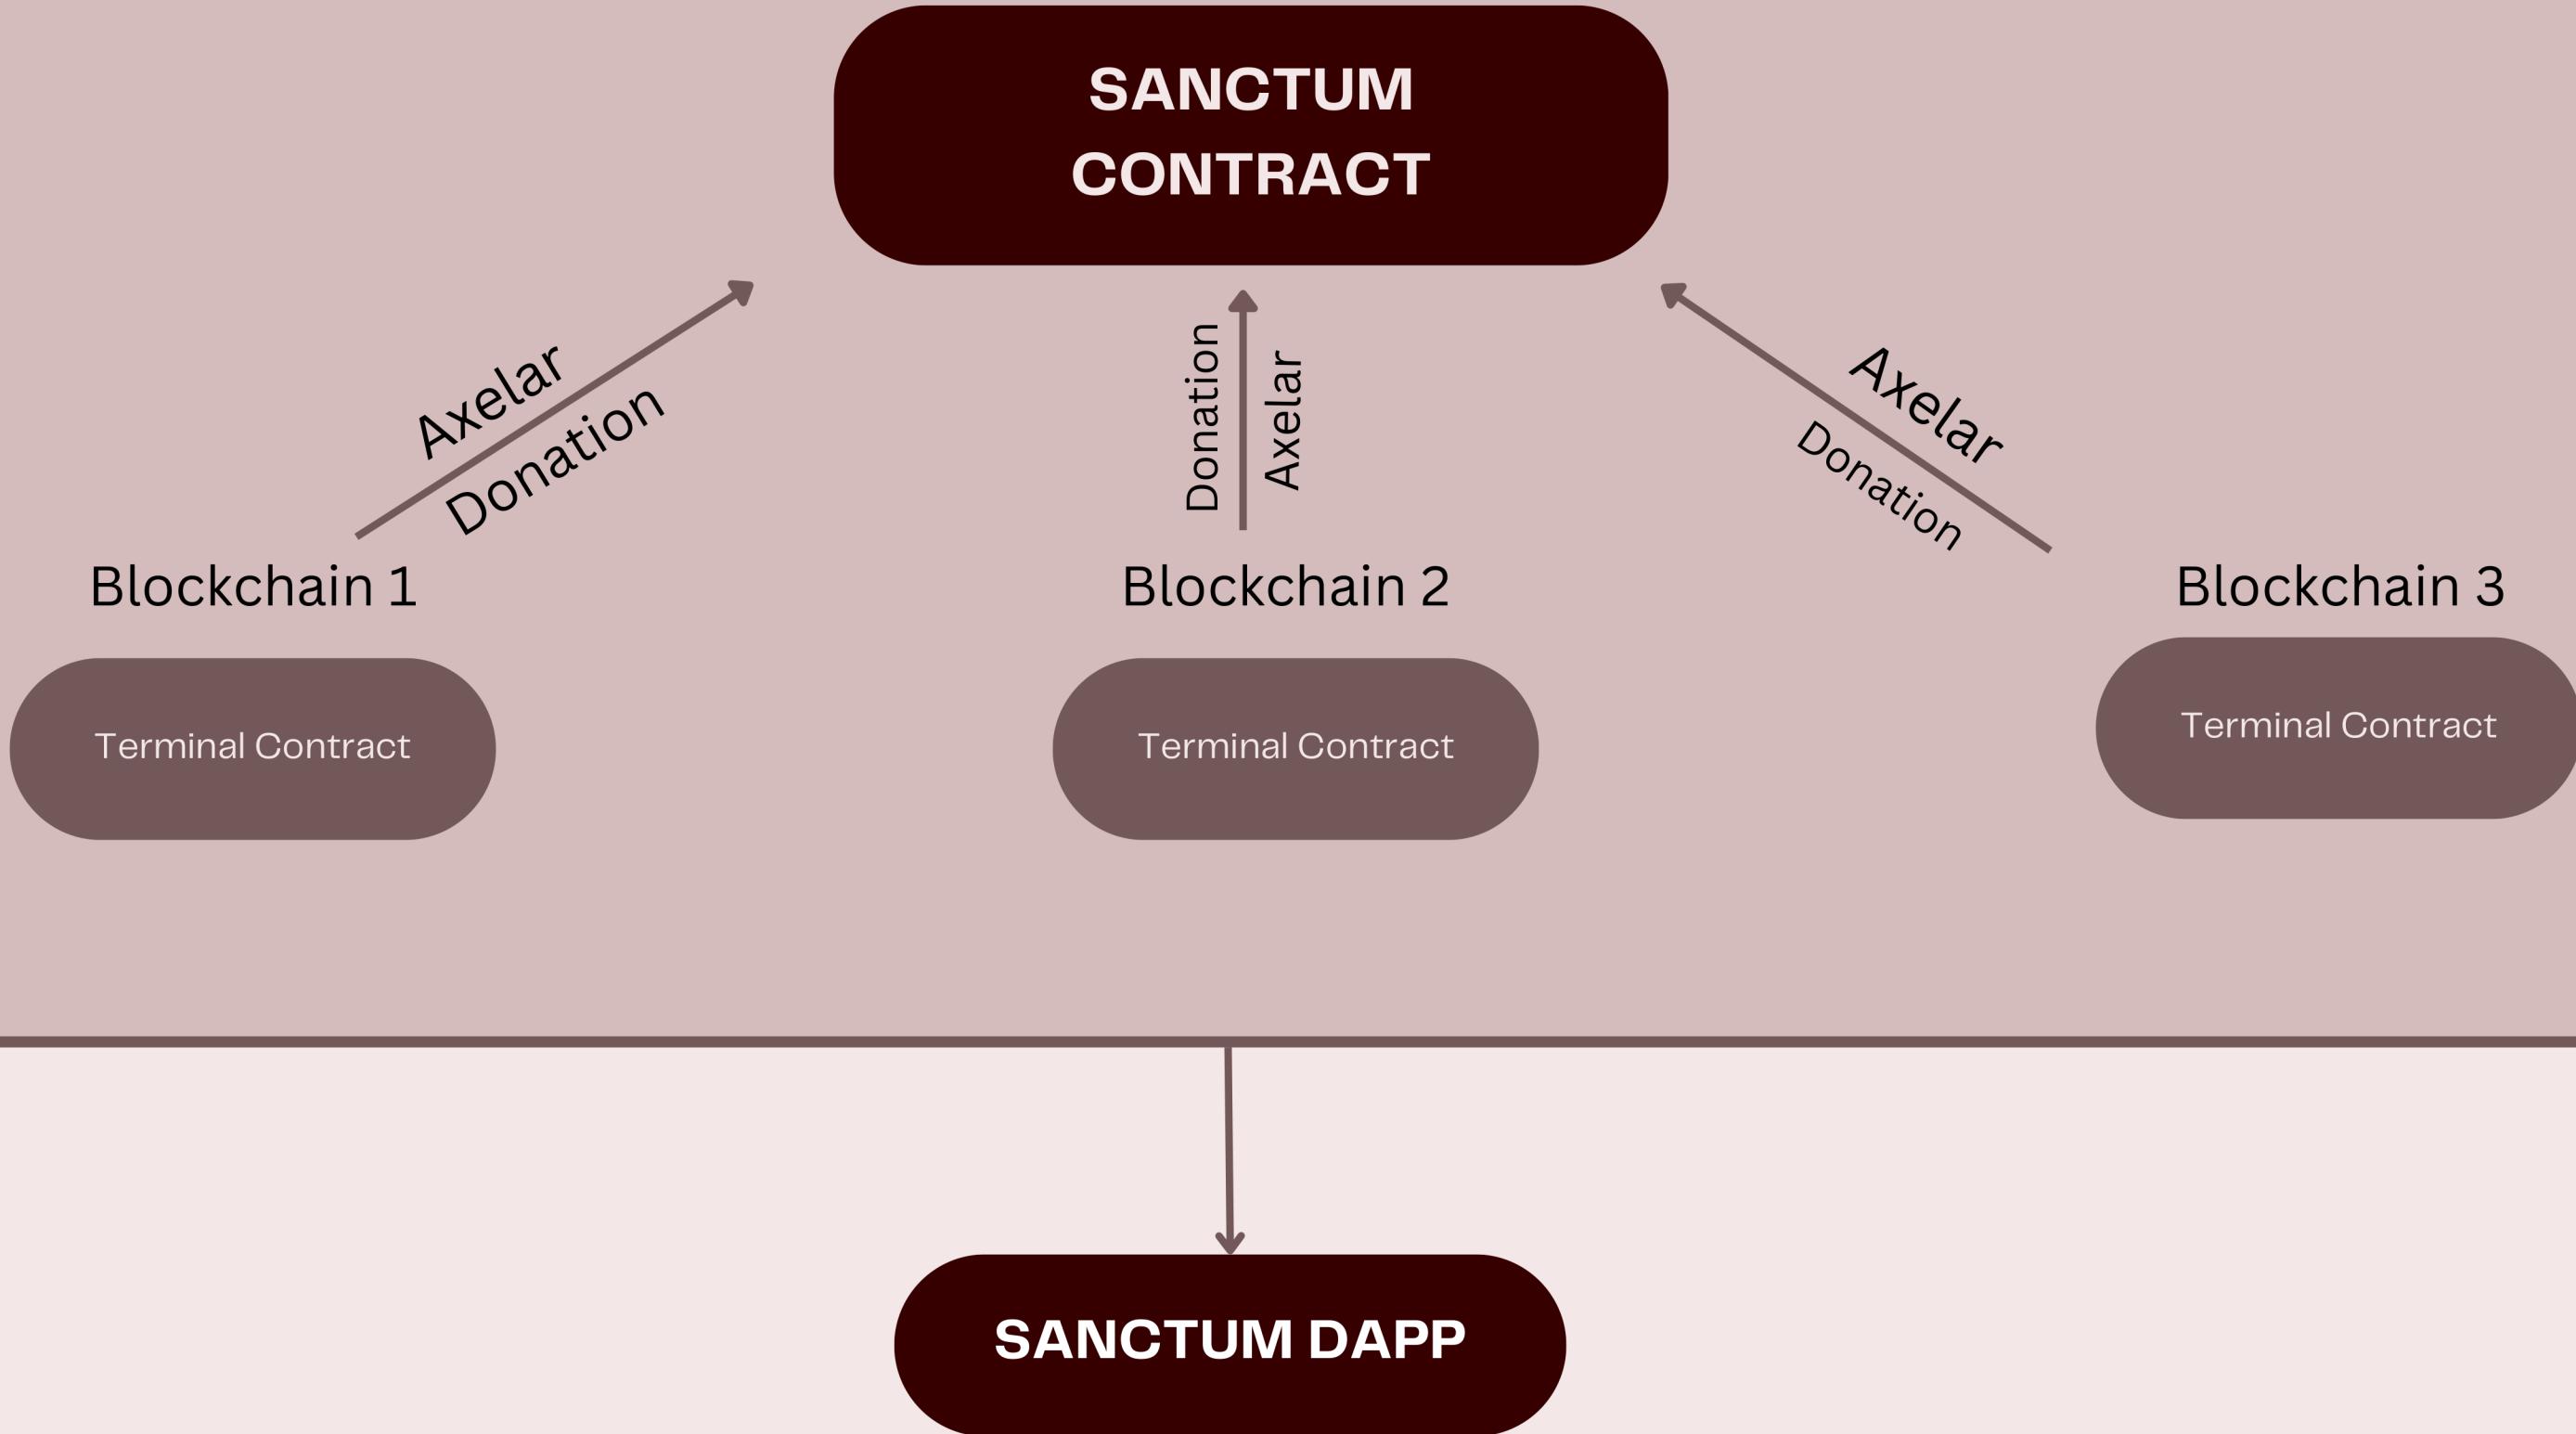

NGOs on the Sanctum platform go through an authentication process to verify their legitimacy. This process includes reviewing legal documentation, financial transparency, and organizational mission alignment to prevent fraudulent or questionable organizations from participating.

Also, NGOs are able to mint out soul-bound token badges as SANCTUM notable organizations.

Donating on SANCTUM

Donations on the Sanctum platform can be made from any blockchain network. This is done securely using Axelar SDK which enables cross-chain communication for web3. Donors can join or create DAOs related to specific projects or causes. In these DAOs, donors can participate in decision-making, vote on project proposals, and actively oversee how funds are allocated and utilized.
